

## WATER CYCLE

### KEY VOCABULARY

Cycle

A series of **events that repeats** in the same order

Solid

A state of matter e.g. ice. Solids **keep their shape** unless a force is applied

Liquid

A state of matter e.g. water. Liquids **take the shape of the container** that holds them. They can be poured

Gas

A state of matter e.g. water vapour. Gases **have no fixed shape**, they expand to fill the container they are in

Water vapour

When **water turns into gas**

Evaporation

A process where water changes state from a **liquid to a gas**

Condensation

A process where water vapour changes state from a **gas to a liquid**

Precipitation

The process of **water moving from clouds back to the surface of the Earth**. Condensation, and the force of gravity result in precipitation. Precipitation can be rain, hail, sleet, snow, hail

## STATE OF WATER

ICE

WATER VAPOUR

WATER

Cirrus clouds are white, thin, wispy, and high up in the sky. They are made of tiny ice crystals

Cumulus clouds are white and fluffy, they contain water droplets but are usually a sign of fair weather.

Stratus clouds are a thin layer of cloud that covers the whole sky

Nimbostratus clouds are dark and bring rain. The water droplets are closer together, letting through only a little light, so the clouds appear darker. "Nimbus" is the Latin word for rain cloud.
